# Integration into the design process

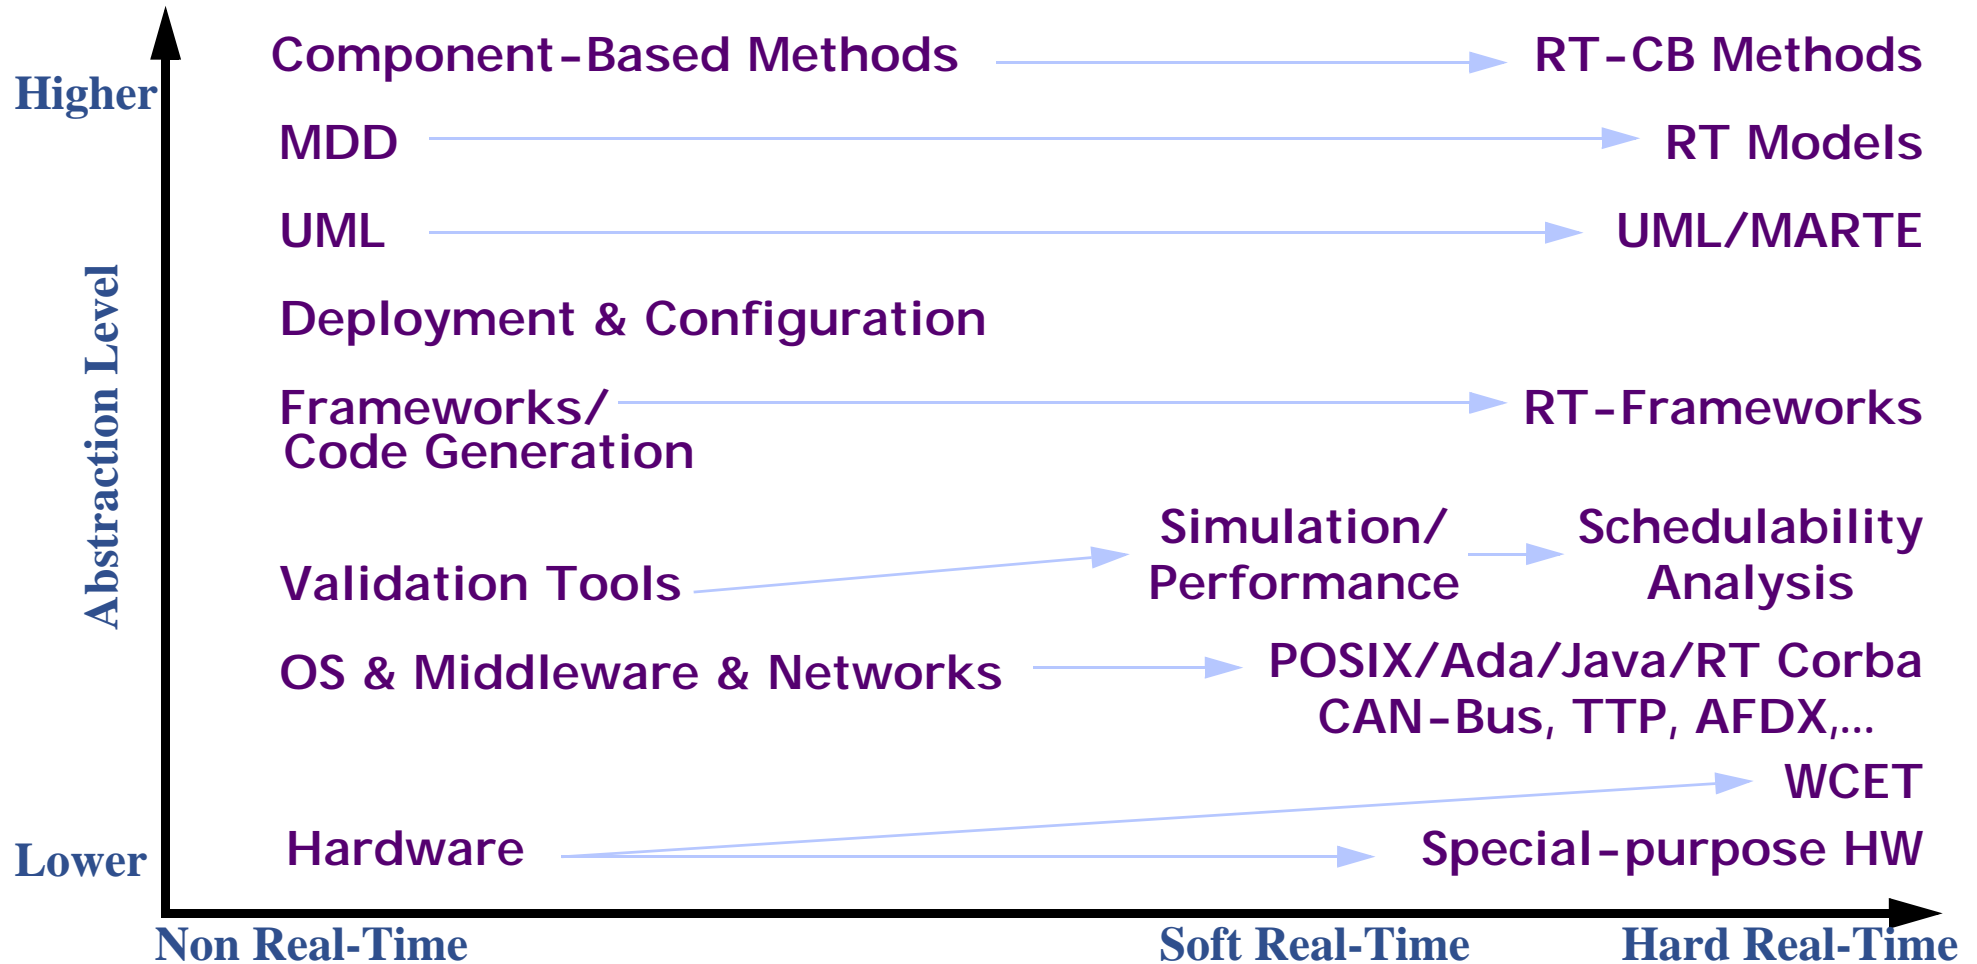

Slide by:  
.M. Drake

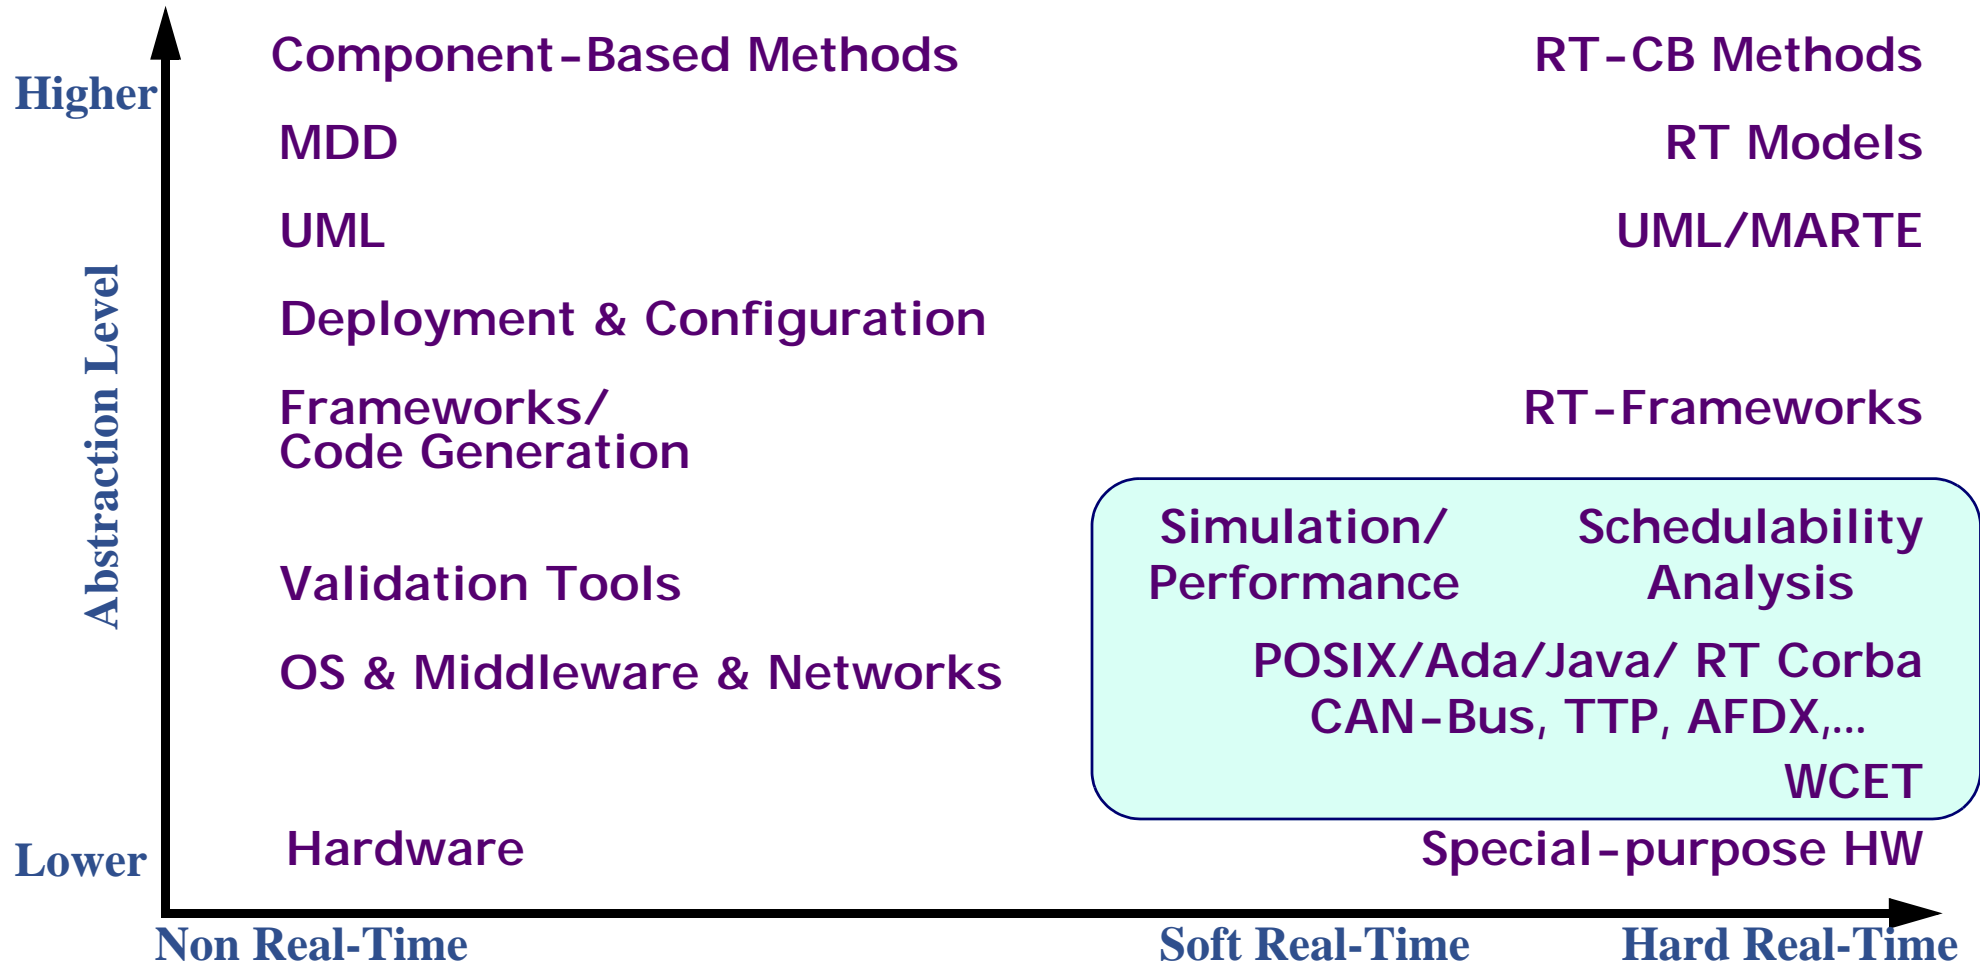

# Integration of tools, techniques and standards

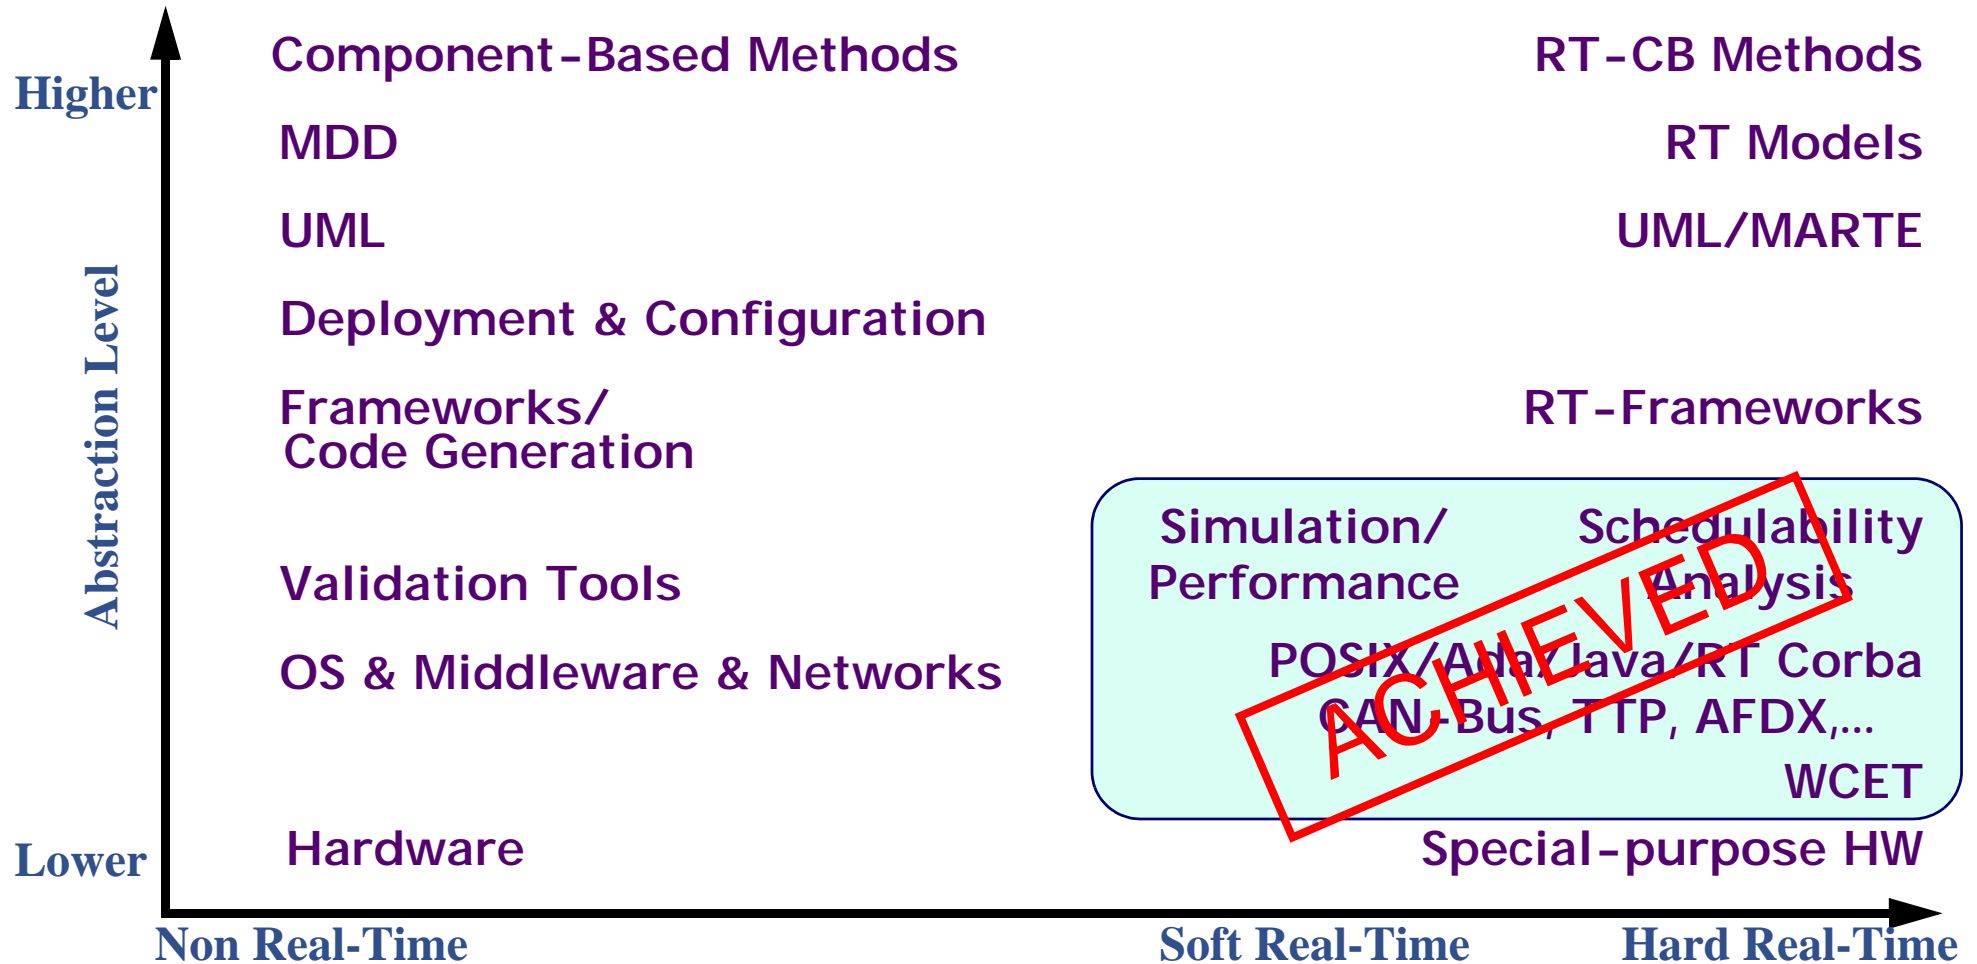

# Integration of tools, techniques and standards

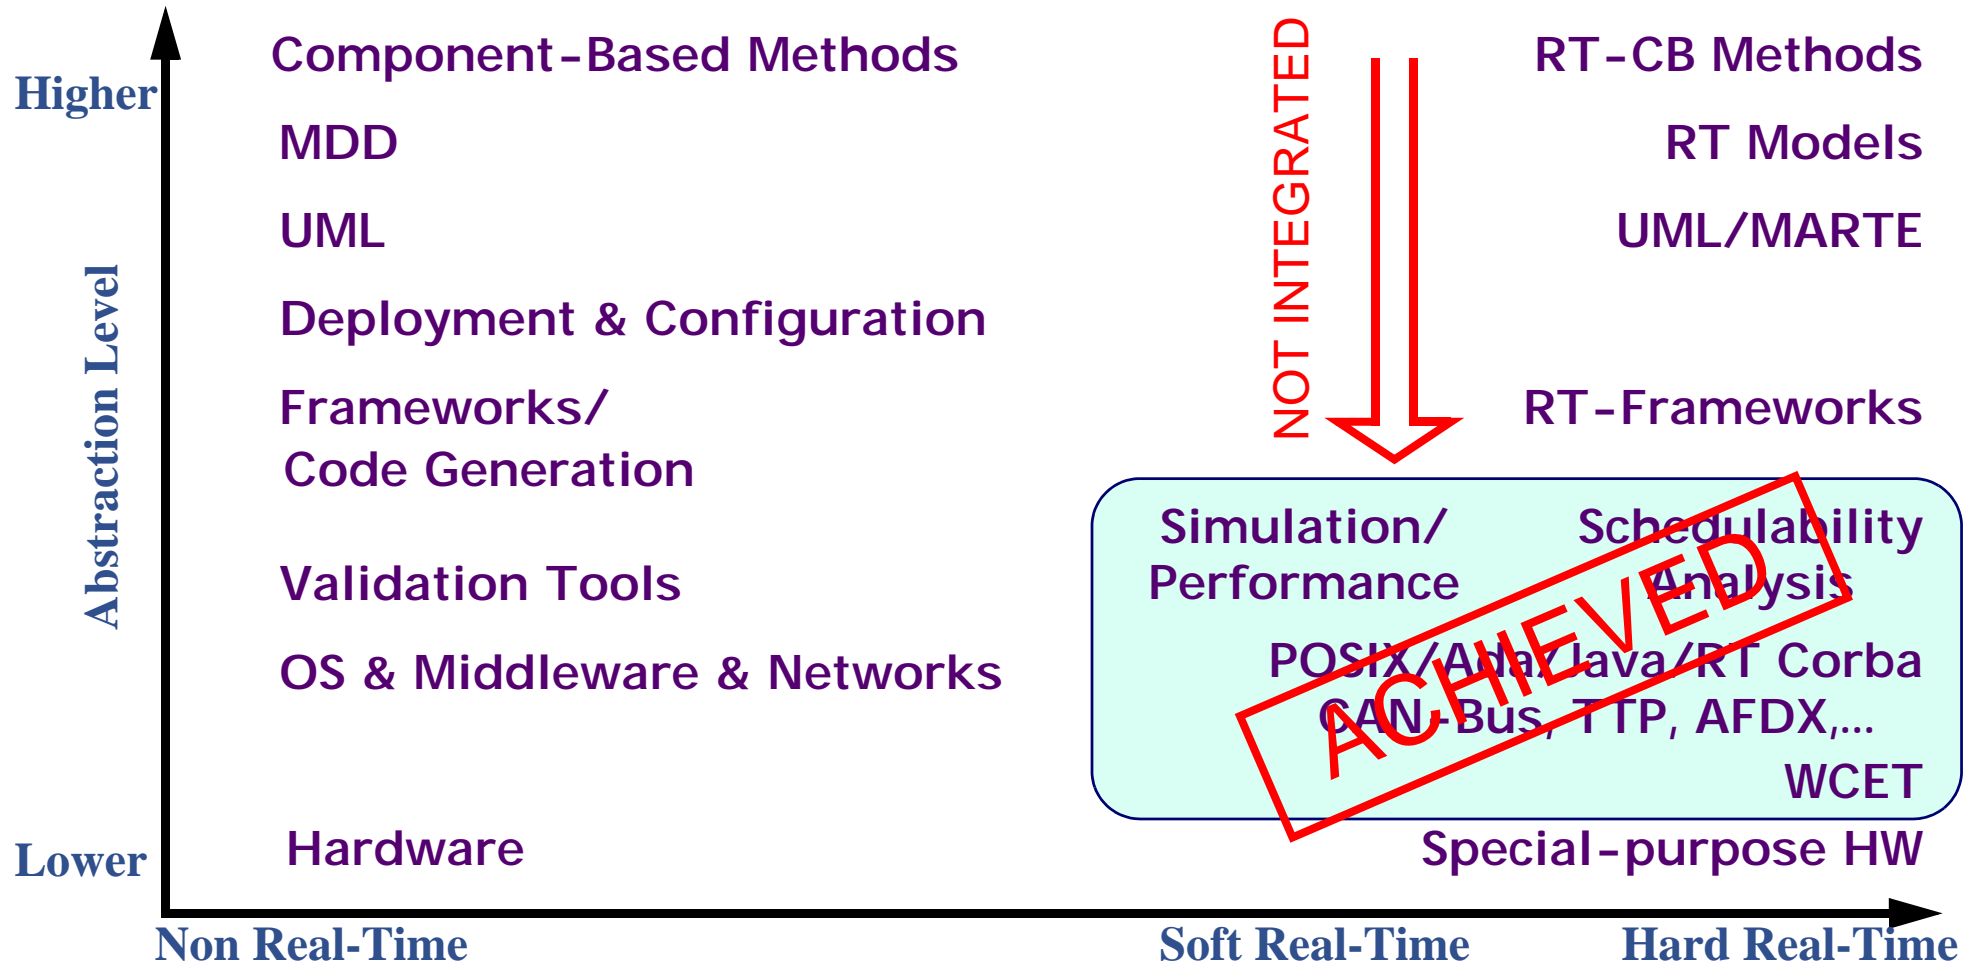

# Integration of tools, techniques and standards

# Integration of tools, techniques and standards

# Integration of tools, techniques and standards

# Conclusion

---

Work in real-time systems has to pay attention to:

- More work in the methods and tools at the higher levels of abstraction
- Integration of design flows
  - models and standards
- While, at the same time, all the tool chain evolves to adapt to new hardware and implementation technology
  - multicore architectures
